Phosphorus cycle — predicted pathway abundance
ColaDeBallena
EsteroZacatecas
Predicted abundance
4000
3000
2000
(aminomethyl)phosphonate degradation
8000
6000
4000
2000
4−amino−2−methyl−5−diphosphomethylpyrimidine biosynthesis II
27000
26000
25000
24000
23000
6−hydroxymethyl−dihydropterin diphosphate biosynthesis I
25000
22500
20000
17500
glucose and glucose−1−phosphate degradation
10000
5000
glycogen biosynthesis III (from &alpha;−maltose 1−phosphate)
24000
23000
22000
21000
glycolysis I (from glucose 6−phosphate)
24000
22000
20000
glycolysis II (from fructose 6−phosphate)
21000
20500
20000
19500
19000
18500
inosine−5'−phosphate biosynthesis I
21000
20500
20000
19500
19000
inosine−5'−phosphate biosynthesis II
21000
20000
19000
18000
17000
16000
inosine−5'−phosphate biosynthesis III
32000
30000
28000
26000
24000
inosine 5'−phosphate degradation
20000
19000
18000
17000
16000
15000
methylerythritol phosphate pathway I
20000
19000
18000
17000
16000
15000
methylerythritol phosphate pathway II
8000
6000
4000
methylphosphonate degradation I
4000
3000
2000
1000
methylphosphonate degradation II
10000
7500
5000
2500
mono−trans, poly−cis decaprenyl phosphate biosynthesis
24000
22000
20000
pentose phosphate pathway
28000
27500
27000
26500
26000
pentose phosphate pathway (non−oxidative branch) I
27000
26000
25000
pentose phosphate pathway (non−oxidative branch) II
1500
1000
500
phosphatidate metabolism, as a signaling molecule
6000
5000
4000
3000
2000
1000
phosphatidylcholine acyl editing
28000
26000
24000
22000
phosphatidylglycerol biosynthesis I (plastidic)
28000
26000
24000
22000
phosphatidylglycerol biosynthesis II (non−plastidic)
4000
3000
2000
phospholipases

80
40
0
phospholipid desaturation
20
10
0
phospholipid remodeling (phosphatidylethanolamine, yeast)
20000
19500
19000
18500
phosphopantothenate biosynthesis I
30
20
10
0
phytate degradation I
14000
13000
12000
11000
10000
pyridoxal 5'−phosphate biosynthesis I
24000
22000
20000
18000
sucrose degradation IV (sucrose phosphorylase)
20000
19000
18000
17000
16000
superpathway of geranylgeranyl diphosphate biosynthesis II (via MEP)
100
50
0
superpathway of phosphatidylcholine biosynthesis
30000
28000
26000
24000
superpathway of phospholipid biosynthesis I (bacteria)
8000
6000
4000
2000
superpathway of pyridoxal 5'−phosphate biosynthesis and salvage
10000
7500
5000
2500
superpathway of thiamine diphosphate biosynthesis II
14000
13500
13000
12500
12000
11500
superpathway of thiamine diphosphate biosynthesis III (eukaryotes)
3000
2500
2000
1500
superpathway of geranylgeranyldiphosphate biosynthesis I (via mevalonate)
17000
16000
15000
thiamine diphosphate salvage II
10000
7500
5000
2500
thiamine diphosphate salvage IV (yeast)
18000
16000
14000
thiamine phosphate formation from pyrithiamine and oxythiamine (yeast)
4000
3000
2000
1000
0
thiazole component of thiamine diphosphate biosynthesis II
